

Swissmedic GMP inspection confirms the state-of-the-art of the New Building that is now fully operative

After the construction of the new building and the warehouse qualification, SwissMedic has carried out the planned plant inspection, evaluating in particular the new structure, GMP system and production batch records.

The GMT site passed successfully the inspection which lasted three days, reaffirming the company's high quality standards which, as the inspectors confirmed, have continuously improved.

The site expansion announced in April 2018 has now been successfully completed; the new building includes offices and a warehouse for starting materials to support increased production of reduced folates for worldwide distribution.

“This corresponds to a major upgrade that will follow with additional renovation and modernization of the original building, part of our vision of continuous improvement to keep the highest standards of quality and technology” said Gabriel Haering, CEO.

About GMT Fine Chemicals SA

GMT Fine Chemicals SA is a Swiss company founded in 1998 in the industrial area of Couvet, a village located in the canton of Neuchâtel, in the French speaking region of Switzerland.

The company has been designed to allow the chemical synthesis of Active Pharmaceutical Ingredients (API) under conditions guaranteeing the quality of the products (GMP), the safety for personnel and the environment protection.

The company strategy is to supply a wide variety of therapeutically active substances used in the manufacture of pharmaceutical drug products, primarily used in oncology and women health.

Swissmedic – the Swiss Agency for Therapeutic Products – has granted GMT Fine Chemicals SA a Good Manufacturing Practice Certificate to manufacture and distribute Active Pharmaceutical Ingredients (API).

The company has also been successfully inspected by the FDA in 2016 and has an Accreditation of Foreign Manufacturer from the Japanese PMDA since 2005.
